

PocketPC Battery and Memory Monitor user manual

PocketPC Battery and Memory Monitor, displays the battery charge percent, estimated remaining battery time, and available storage memory, on the today screen of your PocketPC. An advanced algorithm accurately calculates the remaining battery time, based on your usage profile and displays this information on your today screen.

The bar on the left side of the plugin, will display the remaining battery percentage and estimated time until the battery completely discharges. Please keep in mind that the estimated remaining battery time, will only be displayed after the battery charge drops at least 1%. This is needed in order to correctly calculate and display the remaining time. The estimated remaining time will fluctuate, based on the way you use your device.

On the right side of the plugin you will see the total available storage memory of your device.

Note for the demo version: The demo version will stop displaying battery information after the charge drops below 50%. The registered version of the software doesn't have this limitation.

Features:

- Display remaining battery percentage
- Choose between 3 display modes : (graphic only, text only, graphic + text)
- Displays estimated remaining time in days, hours, minutes and seconds.
- Lightweight software. Uses very little memory, storage space and Today screen area.
- Updates are completely free, for lifetime, for this software.
- You can re-download your software anytime you wish, completely free, for lifetime.

Installing PocketPC Battery and Memory Monitor

Connect your PocketPC to your computer through its data cable or cradle, and wait until ActiveSync starts. After that, run the installer for PocketPC Battery and Memory Monitor.

On your device, when prompted, choose to install PocketPC Battery and Memory Monitor in the device memory, and not on the storage card. The application is lightweight, and will use a very small amount of storage memory.

In case the plugin doesn't show up on your today screen right away, go to:

Start -> Settings -> Today -> Items

Uncheck and then check again the **PPC Monitor** item.

Customizing PocketPC Battery and Memory Monitor

To customize the display of PocketPC Battery Monitor please go to:

Start -> Settings -> Today -> Items

You can choose between 3 types of display:

Bar – It will only display a bar reflecting the battery charge, without any additional information

Text only – It will display only a text message with the remaining battery percentage and estimated battery time

Bar and text – It will display both a graphical bar, and text information.
