

## PocketPC Hacker Evolution user manual

The aim of the game, is to hack as many servers as possible, in order to obtain money. Always make sure you have money in your balance, as money is constantly being deducted from your balance, to reduce and cover your trace. New servers will appear constantly on the target map.

### How to play the game

New servers are constantly being unveiled on the target map. Click on a server and select the **HACK** button, to hack the server. After you have hacked into the server, use the **LOGIN** button to connect to it, and then use the **XFER \$\$\$** button, to transfer the money. Keep an eye out on the trace timer, so it doesn't reach 0. You will lose the game when it reaches 0.

You can also use the **TRASH** button, to completely wipe out the server, for extra score points.

If the time is not enough to transfer the money, you can connect several times to transfer it, or setup a bounced link, using the existing servers on the map. To setup a bounced link, select a server on the map, and press the **BNC** button. You can use as many servers as you wish. When you have finished setting up the bounced link, select the server you wish to connect to, and press the **LOGIN** button.

### Saving the game

The game automatically saves your progress when you press the exit button, and loads it, when you start a new game. The save game is reset, when you lose the game.
